

## Hyperbaric Oxygen Therapy Windsor

Hyperbaric Oxygen Therapy Windsor - Therapy called oxidative therapy is done by introducing extra energy into the body. The three ways which this can be performed is to introduce oxygen inside the body under pressure using Hyperbaric Oxygen, through combining ozone gas in with the blood, or through infusing Hydrogen Peroxide or H<sub>2</sub>O<sub>2</sub> in a vein. It just takes a tiny amount of Hydrogen Peroxide to produce a large amount of oxygen, hence, parts on the body that suffer from poor circulation can benefit very much from the supply of oxygen.

Oxidative therapy has been made use of since the 1920's, when Dr. T.H. Oliver initially made use of Intravenous Hydrogen Peroxide during an outbreak of influenza. This successful treatment helped numerous people and results were reported in a British medical journal, the lancet. Several years after, a paper was published by Dr. Charles Farr entitled "Therapeutic Use of Intravenous Hydrogen Peroxide." This paper has become the protocol for physicians who administer H<sub>2</sub>O<sub>2</sub>.

There are different theories which exist to explain how this particular therapy works. Scientists and researchers are currently discovering that the presence of H<sub>2</sub>O<sub>2</sub> within the body is much more complicated than originally thought. The benefits of Oxidative Therapy have been show helpful for the following health conditions: Cerebrovascular Disease, Cardiovascular Disease, Coronary spasm, Cardiac arrhythmia, Asthma, Peripheral Vascular Disease, COPD, Pulmonary Diseases, Raynaud's Phenomenon, Influenza, Bronchiectasis, Chronic Bronchitis, Herpes Simplex Virus, HIV, Lupus, Immune Disease, Alzheimer's, Multiple Sclerosis, Chronic Fatigue, Fibromyalgia, Environmental Poisonings, Rheumatoid Arthritis, Parkinson's Disease, Migraines, to name a few.

Because oxidation is a really essential energy producing chemical response in the body that utilizes different types of oxygen, the treatment should be controlled carefully in order to prevent damage to surrounding normal tissue. Anti-oxidants in the type of vitamins and enzymes protect the body from oxidative damage. Nevertheless, the immune system uses oxidative energy as a weapon so as to directly kill infectious agents such as yeast, bacteria, viruses and parasites.
